

Mico Ang, Senior Software Developer

09994827961, mico.dahang@gmail.com

LINKS	GitHub , LinkedIn	
PROFILE	Seasoned Full-Stack Software Developer with strong expertise in frontend engineering, SEO, UI/UX, and scalable web application development. Brings extensive experience building and maintaining business systems, internal tools, healthcare platforms, marketing sites, maps-based platforms, dashboards, and interactive web applications using Vue.js, React.js, Nuxt.js, Django, Python, RiotJS, and Node.js. Frontend-focused by specialization, with solid backend and deployment experience. Strong background in technical SEO, content-driven growth, performance optimization, and modern web architecture. Also capable of working on AI-integrated solutions, including analytics workflows, chatbot features, automation, and insight-driven user experiences.	
CORE STRENGTH	Frontend Development: Vue.js, React.js, Nuxt.js, TailwindCSS, JavaScript, TypeScript, HTML, CSS Backend Development: Django, Python, Node.js, REST APIs SEO: Technical SEO, on-page optimization, Google Search Console, sitemap/indexing, content structure UI/UX: Responsive design, Figma collaboration, component design, frontend architecture Integrations: Mapbox, Google APIs, Stripe, CMS platforms DevOps / Infra: Docker, Linux, Nginx, AWS EC2 Additional Capability: AI integration, analytics dashboards, automation workflows, intelligent application features	
EDUCATION HISTORY		
2014 — 2018	Bachelor of Science Major in Computer Science, Ateneo de Davao University President's Lister (1st Semester 2017)	
2010 — 2014	Secondary Education, Nieves Villarica National High School	
SKILLS & SPECIALIZATION	Reactjs Vuejs Django React Native Javascript UI/UX Design	Docker HTML + CSS SEO TypeScript NodeJS
PROJECT INVOLVEMENT		
Oct 2017	Detecting Boredom, Engagement, Frustration while Programming using Keystroke Dynamics	Ateneo de Davao University
	Undergraduate thesis paper for Computer Science. Focused on Data Mining and Analysis	
Oct 2016	GK Pueblo Cooperative Management	Ateneo de Davao University
	System Analysis and Design and Software Engineering project for the organization of Gawad Kalinga Cooperatives.	

PROFESSIONAL EXPERIENCE

May 2018 — Aug 2019

Software Developer, Apollo Technologies Inc.

OSCAR (Asset Scanning System)

- Developed an **Android-based asset management system** for scanning company assets and syncing data to backend systems
- Implemented **local database storage with synchronization workflows** for reliable offline-to-online data handling
- Built core **UI and system functionalities**, ensuring smooth user interaction and data accuracy
- Contributed to **project architecture, API integration, and system documentation** (user manuals and technical specs)

Technologies Used:

Android Java, UI Design, API Integration, Database Design, System Architecture

Jarvis Android (Inventory Management System)

- Developed an **inventory management application** for updating merchant store data
- Contributed to the **full system lifecycle**, including planning, feature improvements, and implementation
- Designed **data representation and UI/UX workflows** for better usability and efficiency
- Improved system flow through **feature brainstorming and optimization from previous versions**

Technologies Used:

Android Java, UI Design, API Integration, Database Design, System Architecture

ECMS Warehouse Management

- Built a **warehouse management system** for handling inventory operations and data processing
- Contributed across the **full development lifecycle**, including frontend, backend, and system optimization
- Designed **UI, database structure, and API services** for efficient warehouse workflows
- Implemented **data handling and performance optimizations**

Technologies Used:

Android Java, UI Design, API Services, Database Design, System Architecture

SalesTrack (Inventory & Workforce Tracking System)

- Developed an **inventory tracking system** with workforce monitoring features
- Enabled real-time updates for **store inventory and employee progress tracking**
- Designed user interfaces and system flows for operational efficiency

Technologies Used:

Android Java, UI Design, API Integration, Database Design, System Architecture

FDroid (Internal App Repository System)

- Worked on an **internal application repository system** for distributing company applications
- Configured backend services and deployment environment
- Supported system setup for application hosting and access

Technologies Used:

Linux, Django Configuration, Apache, Networking

System Administration & Infrastructure Support

- Gained hands-on experience in **server management, networking, and infrastructure setup**
- Worked on **package configuration, virtualization, and deployment environments**
- Assisted in managing system environments and technical operations

Technologies Used:

Linux, Apache, Nginx, OpenStack, Virtualization, Docker, Networking

POS V2 Update

- Contributed to a **patch update for an existing POS system**
- Implemented UI-related improvements and fixes for system enhancement

Technologies Used:

Java (Native), UI Design

CliQQ Kiosk (Customer Service Platform)

- Developed a **web-based kiosk platform** providing business services to customers
- Built frontend interfaces and integrated backend services
- Contributed to overall system functionality and user interaction

Technologies Used:

React.js, Django, UI Design, ReactJS, Django Backend, UI Design, A Website implementation that provides various business services to the customers.

Software Developer (Full-Stack, Frontend-Focused), Countable Web Productions

Led development of **CMS-driven platforms, healthcare systems, and marketing applications**, with strong ownership in **frontend architecture, SEO, and full-stack delivery**. Played a key role in **team coordination within the network team**.

Corvus (Battery Inspection System)

- Developed a **full-stack battery inspection platform** for evaluating battery status and compliance
- Built backend logic and frontend interfaces
- Ensured scalable and containerized deployment

Technologies Used:

Django, Django Templates, RiotJS, Docker

BB / HCB (Widget Platform & Customer Support System)

- Built and maintained a **custom widget platform** for client-side integrations
- Developed **CMS-like configurable components** for dynamic business use cases
- Contributed to both frontend and backend development

Technologies Used:

Node.js, jQuery, Pug HTML, RiotJS, Docker

FP Map Project (Map-Based Data Visualization)

- Developed a **map-based visualization platform** for community and language data
- Implemented interactive UI and map features
- Contributed to frontend architecture and UX design

Technologies Used:

Mapbox GL, Vue.js, Nuxt.js, Django, Docker

Actone Development (Ultrasound Content Platform)

- Built a **CMS-driven platform** for managing and sharing ultrasound media
- Developed full-stack features including rendering and content workflows
- Supported dynamic media generation

Technologies Used:

Django, Django Templates, RiotJS, WebGL, Docker

Cortico Marketing Revamp (CMS + Marketing Platform)

- Rebuilt a **modern CMS-driven marketing platform** for scalability and performance
- Improved content delivery architecture
- Contributed to frontend restructuring

Technologies Used:

Vue.js, Strapi, Docker

Cortico Marketing Site (Clinic Marketing Platform)

- Developed a **full-stack marketing website** for clinic visibility and patient acquisition
- Implemented **map-based clinic discovery features**
- Delivered responsive and SEO-optimized pages

Technologies Used:

Vue.js, TailwindCSS, Mapbox, Strapi CMS

Cortico Product (Core Clinic System)

- Built features for a **clinic management platform**, including dashboards and payment systems
- Developed frontend-heavy modules with backend integration
- Ensured scalable and maintainable system architecture

Technologies Used:

Django, Django Templates, HTML, CSS, RiotJS

Cortico Marketing Clinic Map

- Developed a **clinic directory platform with interactive map browsing**
- Built frontend features for hover-based UI and location display
- Maintained and enhanced map-based experience

Technologies Used:

Vue.js, Nuxt.js, TailwindCSS, Mapbox, Strapi CMS

Cortico SEO (Search Optimization & Growth)

- Led **technical SEO initiatives** improving indexing and search visibility
- Implemented sitemap generation and Google Search Console workflows

- Optimized landing pages and content structure for organic growth

Technologies Used:

Google Search Console, SEO Optimization, Frontend Performance Optimization

Cortico Clinic Website (CMS Platform)

- Built a **CMS-driven clinic website system** with dynamic content rendering
- Designed flexible frontend architecture for multi-clinic support
- Enabled scalable customization and content management

Technologies Used:

RiotJS, TailwindCSS, Django, Python

Jan 2021 — Aug 2021

Lead Software Developer, Big Oil Co

Big Oil Employee Hiring System

- Developed a **full-stack employee hiring and management system** for collecting and maintaining applicant data
- Built workflows for **data submission, updates, and lifecycle management of candidate information**
- Integrated **Google Sheets as a data store**, enabling real-time updates and centralized data tracking
- Designed responsive and user-friendly interfaces for applicant interaction and data input

Technologies Used:

React.js, Material UI, Node.js, Google API Services

Big Oil Inventory Management System

- Developed a **full-stack inventory management platform** covering product creation, processing, and distribution workflows
- Implemented features for **tracking product lifecycle, quantity returns, and delivery processes**
- Built interfaces for efficient **inventory monitoring and operational management**
- Ensured smooth data flow between frontend and backend systems for real-time tracking

Technologies Used:

React.js, Material UI, Node.js, Google API Services

Feb 2022 — Feb 2023

Software Developer, Traidify

Blockchain Website

- Developed a **full-stack financial platform** for viewing stocks and blockchain assets with real-time data and analytics
- Built the **dashboard UI and navigation system**, enabling users to explore market data efficiently
- Implemented a **Risk Tolerance Quiz System** to assess investor profiles and personalize user experience
- Developed a **Technical Analysis module** displaying statistical insights for selected assets
- Built **real-time charting features** for stock and blockchain data visualization
- Implemented a **membership and payments system**, restricting access based on subscription plans

Technologies Used:

React.js, Material UI, Redux-Saga, Django, Python

Traidify Landing Page

- Led development of the **landing page for the Traidify trading platform**, focusing on user engagement and conversion
- Built dynamic sections showcasing **trending stocks, educational content, and interactive quizzes**
- Contributed to **content-driven features** such as articles and investor-focused materials
- Ensured responsive design and seamless integration with backend systems

Technologies Used:

React.js, Material UI, Redux-Saga, Django, Python

Mar 2021 — Present

Senior Project Lead, ASTA Softwares

Senior Frontend Developer / Technical Lead

March 2021 – Present

Led development of multiple **full-stack platforms and CMS-driven systems** across employee management, food delivery, and interactive web applications. Owned **frontend architecture**, contributed to backend integration, and led **team coordination, mentorship, and delivery within the network team**.

Employee Management System

- Led development of a **full-stack business management platform** for employee records, attendance, payroll, project tracking, and internal operations

- Architected and implemented **scalable frontend systems** for complex CRUD workflows and data management
- Contributed to backend integration and business logic using Django
- Ensured **maintainability, scalability, and consistency** across system modules

Technologies Used:

Vue.js, Django, Python, Google Service API

DineEase (Food Delivery Platform)

- Developed a **full-stack food delivery platform** with map-based ordering and dynamic restaurant management
- Built **interactive user flows and responsive UI** for ordering, browsing, and promotions
- Implemented **Mapbox-based geolocation features** for location-aware ordering
- Contributed to **pricing logic and cost/profit calculation systems** for business operations

Technologies Used:

Nuxt.js, Vue.js, Django, Docker, Nginx, AWS EC2, Mapbox

RVSP (Interactive Event Platform)

- Developed an **interactive web platform** transforming static event pages into immersive, storytelling-driven digital experiences
- Built **highly interactive UI components** focused on engagement and simulation-like behavior
- Designed reusable frontend structures for **scalable and repeatable project delivery**

Technologies Used:

Vue.js, React.js, Django

Technical Leadership & Network Team Coordination

- Led **frontend architecture and full-stack coordination** across multiple projects and teams
- Mentored junior developers, conducted **code reviews**, and ensured code quality standards
- Managed **task delegation, sprint planning, and Agile workflows**
- Contributed to **deployment pipelines and infrastructure setup** using Docker, Nginx, and AWS
- Integrated third-party services including **Google APIs and Mapbox**
- Drove improvements in **performance, scalability, and frontend consistency** across applications

Technologies Used:

Docker, Nginx, AWS EC2, Google APIs, Mapbox

TECHNICAL SKILLS

Developed full-stack web application, from front-end, to back-end, and architecture itself.

Experienced in Web Development, especially using HTML, Javascript, CSS, SCSS, Javascript based framework, 3rd party CSS framework, ensure UI/UX and website animation

Experienced Django web development, from back-end to Django templates

Experienced in Frontend architecture framework, like REACTJS, VueJS development

Experienced in team planning and efficient client communication

Experienced in MAPBOXGL and WebGL development

Experienced in DOCKER development, up to deployment

Experienced in using LINUX, and is using LINUX for development

Experienced in STRIPE Payments

Experienced in Charts Development

Experienced in SEO Inbound/Outbound Management
